

JARROD MUNRO

SKIN DEEP

YEAR 7

SAN CLEMENTE HIGH SCHOOL

This photo represents the way technology presents a world contrary to our real lives. The photo is a self-portrait, but through technology I am changed in a way that I may like, or may not like. Technology and the digital world is also in abundance around us. So I used a double exposure technique and covered my skin with another image because the skin is the body's largest organ. This symbolizes how big the digital world is for all of us. It is now such a big part of us as humans, so much so that we are covered, our lives are immersed in technology.

IZAK TETEVANO

CONNECTION

YEAR 7

SAN CLEMENTE HIGH SCHOOL

Even though we were all in the same room, we all had separate screens.

Far from being isolated, we were together. On the same sofa, in the same house. Covid-19 lock down was a time where many families felt vulnerable and alienated. However, there were times when our screens became our salvation. Technology helped us to stay connected. I tried to capture this human moment in my photograph... a moment without the need for discussion or physical activity; a shared moment.

JESSIE FORBES

ENCOUNTER

YEAR 7

SAN CLEMENTE HIGH SCHOOL

This artwork considers the way I see the beauty and goodness of the world through nature. Nature that sweeps me away, that is inside me and embraces me. I have used technology to create this image of the way I encounter the world.

JET DIVER- RUNDELL

BLUE CONNECTION

YEAR 7

SAN CLEMENTE HIGH SCHOOL

This is a portrait of me living in isolation communicating with my friends over the computer. We connected this way so we could still have fun together online. We could talk instead of being unsafe and meeting face to face. We have had fun doing this, it makes us laugh and it makes us smile. When I finish up doing my jobs and playing basketball, I hop online and technology allows me to still connect and check in with my friends, to have fun with them, while at the same time working together to get through this difficult time.

JORDAN SUCAHYADI

ISOLATION

YEAR 7

SAN CLEMENTE HIGH SCHOOL

The buildings in the picture represent oppression and deep sadness at a time that when we have been isolated from some of our family and friends, and from the places we can go to as normal every day. It can feel like we can't get any fresh air, sunlight or have any fun.

The golden mask represents our only protection against this enemy virus, a virus that keeps us from our family and friends.

In some circumstances the only way to talk to family and friends is to go online with the technology we use every day. Through this technology we can stay connected with each other.

HANNAH RYDER

SOLITUDE

YEAR 7

SAN CLEMENTE HIGH SCHOOL

In COVID-19 lockdown I had to do all my work on a computer staring at a screen most of the day. It was times like this moment in my photograph that I'm grateful for time alone.

My favourite thing to do is to be with my friends, so I found it difficult being stuck at home. I did have my rabbit Willow and dog Berry to keep me company. All my sports were cancelled, but having all this time was good in a way because it gave me time to focus on myself. This photo captured a moment that I have peace and quiet. It shows that technology is an important factor of our lives as it has the ability to capture important moments.

MACKENZIE THOMSON

A CONNECTED WORLD

YEAR 8

**ALL SAINT'S COLLEGE,
ST PETER'S CAMPUS**

My artwork represents the message that no matter where we are in the world, we can still support each other. The advances in technology throughout the last few decades have given us the opportunity to share our opinions and reach out to help others. The face in the middle represents humanity as a whole and human connection because it's overlapping the two sides. The different colours and abstract shapes of the brain represent different ideas emotions and opinions. The two colours on either side show day and night on different sides of the world. One side shows people protesting and sharing their opinions with signs and the other side shows people on their phones posting their opinions on social media. Overall, my composition is an expression of what boundaries we can overcome to help each other out, this shows that even though people don't show it in the same way they can still have the same opinions. Technology has gotten us to this point where we can speak freely, and we don't all have to be together in order to support one another.

KOKODA MINTO

HIDDEN SHADOWS

YEAR 7

SAN CLEMENTE HIGH SCHOOL

This black and white self-image, with my face half hidden by hair, is reflective of the hidden shadows in the digital world. Often social media half tells the story, with images only showing the lighter parts of life, filtering the unhappy, unattractive, and darker aspects of life. This expression of reality is distorted and has the potential to alienate people from the real world which includes success and failure, sunshine, and rain - the light and dark parts of life. The blurriness reflects the potential loss of connection to the world around us, when we immerse in the digital world. When we interact in the digital world, we are reminded to ask ourselves: What is real and what is fake? What is being hidden to create a distorted narrative? What lies in the shadows beyond the fake news?

MADDISON BRADLEY

IN THE EYE OF THE BEHOLDER

YEAR 7

SAN CLEMENTE HIGH SCHOOL

The photo deeply reflects my love of nature. The photo of the beautiful landscape, was taken at the top of Tomaree mountain, overlooking the never ending beach. The use of technology really helped to represent the beauty of nature. I also used the effect to insert a photo of my face, mostly attempting to showcase my eyes. I used this kind of technology to represent the expression, " beauty is in the eye of the beholder." We therefore, have the power and responsibility to see and embrace the beauty and goodness in the world around us.

JODIE WILLIAMS

CHANGE

YEAR 7

SAN CLEMENTE HIGH SCHOOL

This photo is about how much our lives can change over a small amount of time and how we must adapt. During the Corona virus pandemic we all had a time where we were in lockdown. During this time technology helped us stay in touch with our loved ones who could be in a different city or country. Technology gave us the chance to communicate with them and keep that connection, but it was also easy to become wrapped up in it. A lot of people spent most of their day on technology, whether that be for work, school or enjoyment, but we have to remember to take a break and spend time with our family at home and go for walks in nature. This pandemic helps you realize how much we took things like going outside, playing, sport, doing activities and visiting friends and family for granted.

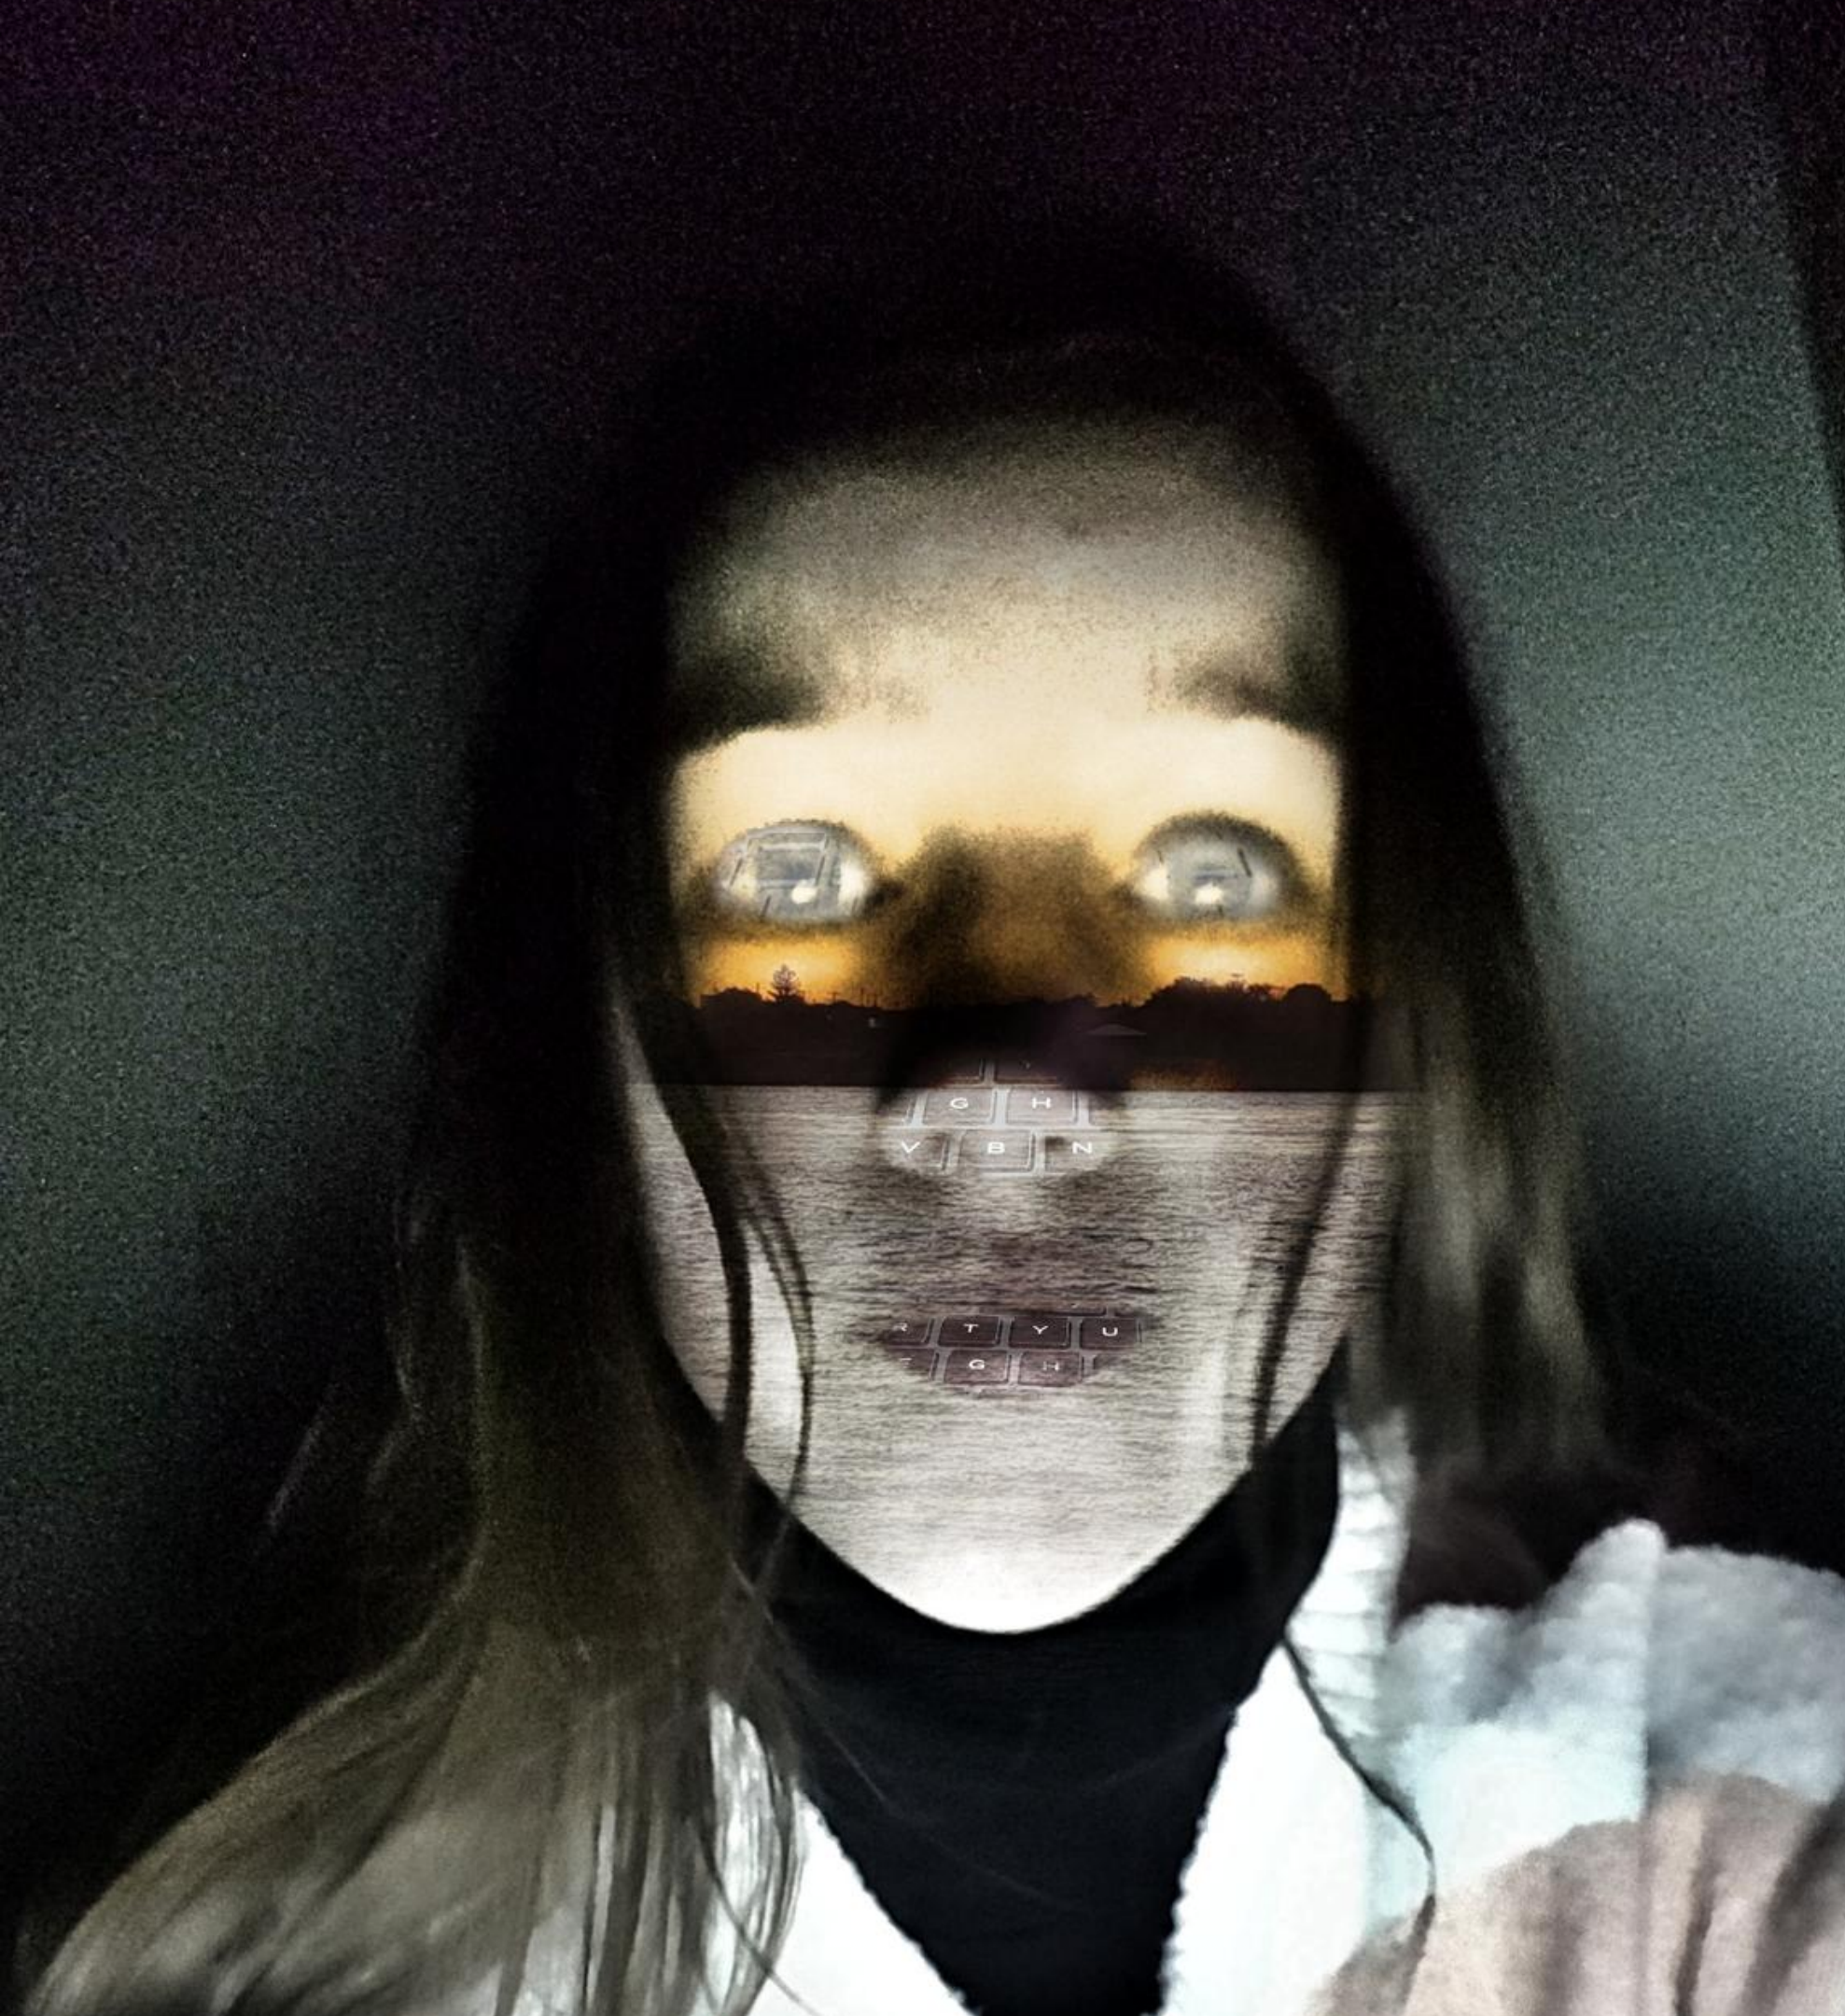

JODIE WILLIAMS

SCREENS OF LIES

YEAR 7

SAN CLEMENTE HIGH SCHOOL

This photo is about how what we see on our screens can not always be real or true. There are many dangers online where people pretend to be someone they're not, or you can receive false information. You have to be careful of what you see on the internet and make sure that you go on trustworthy and reliable sites. You have to have a close look at what you see on your screen and make sure what you see on there is real.

JODIE WILLIAMS

TOO MUCH OF A GOOD THING

YEAR 7

SAN CLEMENTE HIGH SCHOOL

This photo is about how too much screen time can hurt us, mentally and physically. If we spend too much time online, then we can forget the real world and shut people out of our lives. We can become too obsessed with technology and miss out on all the wonderful things in our world.

JODIE WILLIAMS

THE WAY OF OUR MIND

YEAR 7

SAN CLEMENTE HIGH SCHOOL

This photo is about how we can't change the way we see, but we can change the way we think. We can't change what we see in front of us, but we can change the way we perceive things and look for the good in both our environment and technology. Both do a lot of good for us even if we don't always see it. Everybody plays a role in either improving or worsening our world and technology. Humans can cheat and be selfish which is how bad things happen, so we simply have to change our way of thinking. We have to make sure that we see the world around us and the impacts our actions can have.

JODIE WILLIAMS

BALANCING ACT

YEAR 7

SAN CLEMENTE HIGH SCHOOL

This work is about how we must find balance between going on technology and spending time in the world outside us. We have to try and get an equal balance where we can get enjoyment from both things. Technology and our environment gives us many opportunities and they give us something new and exciting. By finding balance between these things we can live a life where we get the best of both worlds.

JODIE WILLIAMS

THE BEAUTY OF THE OUTSIDE WORLD

YEAR 7

SAN CLEMENTE HIGH SCHOOL

This image represents the beauty we can find in everyday life around us, natural things and man-made buildings. If you stop and look you will realize how amazing the world around us is and how much things have changed over time. Sometimes we become too wrapped up in technology and we do not always see the full glory of the wonderful things around us. Sometimes you have to put down your screen and take notice of your surroundings and appreciate them.
